

As a united sales company of several local factories, we can provide not only precision machined parts but also sheet metal parts. In addition, our advantages are both on the fabrication & manufactory and localize design & assembly for components and machine.

Here are a few pictures showing the products and assembly workshop as follows:

welding & assembly 1

304 stainless steel welded base for machinery.

welding & assembly 2

Making TIG welding for the sheet metal panels.

welding & assembly 3

MIG/MAG welded Drive Frame for England houseboat. This part needs 0.2mm zinc-spray coating as first layer and then white powder coating outside. Zinc-spray is getting popular due to its excellent anticorrosive performance.

welding & assembly 4

Assembly for long aluminum profiles, which is used as digital printing table for an Israel company. The profiles are aluminum extrusion products with white anodizing coating. We can make anodizing coating for long aluminum profiles with maximal 20m in the length.

welding & assembly 5

Assembly for components of the plastic injection machine.

welding & assembly 6

Erected machine arms.

welding & assembly 7

One set of drive system for large roll form machine. It is copied for a Canada client, therefore all dimension and hardware parts such as bearings and fastenings are imperial unit.

welding & assembly 8

Aluminum cases are packed well and are ready to delivery.

welding & assembly 9

Packed steel products waiting for shipment.

welding & assembly 10

The parts are loaded into container.
